**Julian Schamroth : A Glimpse of Light: A discussion on the Hebrew Calendar and Judaic Astronomy (Based on Maimonides' Kiddush Ha'chodesh)** before purchasing it in order to gage whether or not it would be worth my time, and all praised A Glimpse of Light: A discussion on the Hebrew Calendar and Judaic Astronomy (Based on Maimonides' Kiddush Ha'chodesh):

4 of 4 people found the following review helpful. Clear, simple and precise By Danny This book is a valuable reference

and aid to understanding the Rambam's classic: "Hilchos Kiddish HaChodesh" - Laws of the Sanctification of the New Moon. The book follows the text of the Rambam (Maimonides), and explains in detail each paragraph. The tables provided make interesting and useful comparisons to relevant sections (such as between current astronomical knowledge and the Rambam's figures, or the debate between Rav Shmuel and Rav Adda). It does tend to simplify a little too much in places, and the summaries at the end of each chapter maybe useful to some, would have been perhaps better placed at the back. The explanations however are full, and have clarified many different problems that I found insoluble with the Rambam, until reading this book. 2 of 2 people found the following review helpful. Clear Elucidation of Rambam's Hilchos Kiddush Hachodesh By A Customer A clear text with the obscure mathematics used by the Rambam clearly derived and explained. I highly recommend this book to anyone interested in understanding the complex greek mathematics used by the Rambam.

Take a historical tour of the Jewish calendar and the astronomy and mathematics upon which it is based. This is an encyclopedic reference work on all aspects of the calendar, and an invaluable aid for the study of Maimonides' Laws of Proclaiming the New Month.
