**Committee on Air Quality in Passenger Cabins of Commercial Aircraft, Board on Environmental Studies and Toxicology, National Research Council, National Research Council : Airliner Cabin Environment and the Health of Passengers and Crew** before purchasing it in order to gage whether or not it would be worth my time, and

all praised *Airliner Cabin Environment and the Health of Passengers and Crew*:

Although poor air quality is probably not the hazard that is foremost in peoples minds as they board planes, it has been a concern for years. Passengers have complained about dry eyes, sore throat, dizziness, headaches, and other symptoms. Flight attendants have repeatedly raised questions about the safety of the air that they breathe. *The Airliner Cabin Environment and the Health of Passengers and Crew* examines in detail the aircraft environmental control systems, the sources of chemical and biological contaminants in aircraft cabins, and the toxicity and health effects associated with these contaminants. The book provides some recommendations for potential approaches for improving cabin air quality and a surveillance and research program.
