Derek Gregory : Geographical Imaginations before purchasing it in order to gage whether or not it would be worth my time, and all praised Geographical Imaginations:

Geographical Imaginations is at once a profound and penetrating reading of geography as a discipline and a discourse, and also an imaginative and sustained attempt to situate that discourse within the fabric of contemporary social theory. Its focus is on understanding the ways in which social life is variously embedded in place, space and landscape. In the fulfillment of this objective, historical imagination, textual exegesis, philosophical scrutiny, sociological interpretation, and geographical sensitivity are interwoven in such a way as to move spatial discourse to new levels of sophistication and subtlety. In mapping human geography into contemporary social theory, the author addresses, reinterprets and questions key theoretical debates and issues - postcolonialism, structuration theory, feminism, deconstruction, postmodernism and poststructuralism - and explores the crucial connection between space, power and knowledge. Deftly argued and illustrated throughout with pointed examples, Geographical Imaginations is both a lucid critique of contemporary social theory and a fundamental contribution to the understanding of social life and its intrinsic spatiality.

"An authoritative map through the thickets of the geographical imagination." Times Literary Supplement "Anyone

who wants to be in touch with contemporary modes of thought in a wide variety of fields will benefit from reading this book ... its passages will open up new perspectives and possibilities for human geography, ranging from an excellent discussion of the expansion of social and cultural geography into topics that are less than traditional." The Canadian Geographer "... subtle and generous ... As a result of his effort to draw connections between diverse projects while respecting their integrity and paying each the compliment of measured criticism, Geographical Imaginations is cheering testimony to just how much has already been achieved by way of transdisciplinary transformations since the 1960s, and a welcome invitation to imagine more." Environment and Planning D: Society and Space
