Mumboldt Alexander Von : Great Journeys Jaguars and Electric Eels (Penguin Great Journeys) before purchasing it in order to gage whether or not it would be worth my time, and all praised Great Journeys Jaguars and Electric Eels (Penguin Great Journeys):

1 of 6 people found the following review helpful. The first inspired Deep Ecology travelogBy Michael B. SpragueThis

condensed version of 4 years of bush-whacking thru jungles of South central America by first Euro scientist to observe it. Bv Humboldt was the Euro genius discoverer author of many books of his travels 1799-1804 of wild native Ecology that Darwin ripped off for his 'Evolution' theory, while Humboldt promoted natural science in Euro for decades while righting his observations of new raw nature patterns that became natural ECOLOGY after "The healthy Hunza" "Organic Farming gardening" by Rodale; 'Earth in Upheaval' 1950s by Velikovsky; Sea Around Us Silent Spring - Carson. I'm still grateful they pioneered our Nature recording their inspired awareness we need more now than ever in this toxic world bioregions.

A great, innovative and restless thinker, the young Humboldt (1769-1859) went on his epochal journey to the New World during a time of revolutionary ferment across Europe. This part of his matchless narrative of adventure and scientific research focuses on his time in Venezuela - in the Llanos and on the Orinoco River - riding and paddling, restlessly and happily noting the extraordinary things on every hand. "Great Journeys" allows readers to travel both around the planet and back through the centuries -- but also back into ideas and worlds frightening, ruthless and cruel in different ways from our own. Few reading experiences can begin to match that of engaging with writers who saw astounding things: great civilisations, walls of ice, violent and implacable jungles, deserts and mountains, multitudes of birds and flowers new to science. Reading these books is to see the world afresh, to rediscover a time when many cultures were quite strange to each other, where legends and stories were treated as facts and in which so much was still to be discovered.

About the Author Alexander von Humboldt (1769-1859) was a Prussian naturalist and explorer. Between 1799 and 1804, von Humboldt travelled South and Central America, exploring and describing it from a scientific point of view for the first time.
