**Michael Weibel : High In Utah** before purchasing it in order to gage whether or not it would be worth my time, and all praised High In Utah:

2 of 2 people found the following review helpful. County highpoints in Utah By Roy Wallen This book is an excellent guide for anyone who wants to complete the highpoints of Utah's 29 counties. For "true" county highpointers, the goal is to get to the highest point in each county. Sometimes this is along a boundary line with an adjacent county (a so-called liner). These liners are distinct from the highest summit in some counties. Wiebel and Miller provide both the highest points and the highest summits. The book is complete with descriptions of approaches and hikes to the

highpoints. Although a map and compass (and the knowledge to use them) is always needed, the book is complete on its own. Highly recommended. 1 of 1 people found the following review helpful. Five Stars By CustomerGreat shape 4 of 5 people found the following review helpful. High Enough... By Charles Miske If your goal is to 'bag' the highest peak in each of the counties listed, then this is THE book to use. While not as thorough as Kelsey's (and the authors admit that, because the goal is to make it simple) the information provided is more than sufficient. The photos don't really show the routes (like Roach's Colorado books) but do give the 'atmosphere' of the climb. I've done a few out of the book, and plan on doing the rest as time allows. I think it's a nifty idea, and would recommend it to anyone with any experience level at all in the mountains (and especially anyone who wishes to drive to the top and sit on the roof of the car to gain more altitude ;).

If you measured the highest point in each county, which of the fifty states would have the highest average elevation? You probably didn't say Utah, but in fact the average elevation of the states county high points is approximately 11,222 feet (Colorado is second at 10,971 feet). Most but not all of Utah's high peaks grow out of a series of mountain ranges that form a backbone from north to south through the middle of the state. Surprisingly, most can also be climbed in a day, and during the warm months climbing gear may be unnecessary. Some summits are even attainable by car. High in Utah is quite consciously a book for peak baggers, complete with a checklist and elevations. Summits range from Kings Peak, Utah's highest at 13,528 to the unnamed peak in Rich County, a mere 9,255. In addition to the county high points, this book also has four classic climbs: Mt. Olympus in Salt Lake County; Mt. Timpanogos above Provo; Notch Peak in the House Range west of Delta; and Wellsville Cone, Cache Valleys western landmark. Since finding a place to start can often be the most frustrating part of a hike, emphasis is placed on directions to each trailhead. There is a road map for each hike, as well as a trail map showing contours. The routes in this guide are not always the easiest or most practical, but they may be the most appealing and are often the most commonly used (lessening human impact on other potential routes). Difficulty levels range from 'extreme' long, steep routes that may require some route finding to 'too easy' reachable by car. Two sets of hiking times are provided to accommodate variations in hiking speed, and there are also sections on flora and fauna, mountain weather, low-impact hiking and camping, equipment, and altitude sickness. "Alaska is our biggest, buggiest, boggiest state. Texas remains our largest unfrozen state. But mountainous Utah, if ironed out flat, would take up more space on a map than either." Edward Abbey, 1927-1989

Provides straightforward directions on how to reach the summits, and enables hikers to enjoy discovering the high-altitude outdoors. Each hike features three easy-to-read maps valuable descriptive information hikers using the maps and the detailed instructions would have a hard time getting lost. For peak baggers and recreational hikers alike. A great resource for active families. BYU Studies
