Miceala Shocklee : Trek: The Galapagos Collection before purchasing it in order to gage whether or not it would be worth my time, and all praised Trek: The Galapagos Collection:

In 2014, freelance writer and Caltech-trained biologist Miceala Shocklee traveled with a handful other scientists to the

Galapagos Islands. The stories, poems, and photographs of this booklet are the result of that trip. Every work in this booklet was written, composed, and shot while hiking volcanoes, riding pangas, and exploring lava fields. Every single one of these stories began back on the islands, an incredible archipelago straddling both the Northern and the Southern hemispheres that has become home to some of the strangest and most beautiful of the worlds creatures. Herein is flight. Herein is fancy. Herein are the figments of a mind in the Galapagos.

About the Author Miceala Shocklee is a professional freelance writer (and biologist) usually located somewhereabouts Southern California. She is irrevocably in love with the ocean and the open sky. Her bloodstream is probably 80% coffee.
