By Garbil Huler This is OK for the purpose of driving back roads, but for actual sportsman use, the maps aren't detailed enough to navigate hills and hollers and rivers and such. It seems like for the price, they could have included full page maps of at least state parks and wildlife management areas. This will give you an idea of where big mountains and valley and hills are, but you would be hard pressed to track down the specific attitude of any particular spot using it. It's nice for

driving with the camper because I can see if there is a flatter route that avoids unnecessary hill climbs, and it can give you an idea of the terrain in certain areas. It's nice because it's got all the back roads, so when GPS stops and tells you to turn around, you can pull this out and confirm that the road you're on is a road and goes somewhere. I knocked off 2 stars because it isn't cheap and it just isn't detailed enough for what I think most people will want it for. One page for an entire county is just too thin for what topo maps are good for! 1 of 1 people found the following review helpful. A Must for Rural West Virginia Travel By lizzzi After searching West Virginia maps unsuccessfully online prior to a trip to find a very remote old family cemetery and home place, I ordered this atlas. The tiny, rural place I needed to find was clearly marked on the map, containing the old names that I could not find anywhere else but knew from family history might still be there. It was a nostalgic, memorable, emotional road trip with this atlas I found my great-grandparents' grave easily thank you WV Atlas and Gazetteer. 1 of 1 people found the following review helpful. Coal Towns in WV By Christopher M. Combs I research West Virginia Coal towns and after about 8 years, and ~130 coal towns later, I thought, why not get a copy of this and have it in the car? Pros and Cons: 1) This is a superb map that lists some rather remote towns and I was to say the least impressed by its depth of town and place name listings 2) It is also NICE to have these some remote places on a singular map, that is cogent because not so many years ago, it was almost miraculous to have a road map with this amount of detail. My past practices relied in topo maps from the 30's and a lot of talking to total strangers which was fun 3) This is also an excellent supplement to a GPS. This is of course a big change for me, as little as 5 years ago, I did not use GPS at all. It was point of fact USELESS in some more remote southern portions of WV, specifically MscDowell, Raleigh and Mercer Counties. That's has changed and so, bam, great purchase 4) I bought used, the product is perfect, no issues at all, getting this new, to be honest, would be a waste as a used copy in decent condition will do the job for certain
