Graeme Cresswell, Dylan Walker, Todd Pusser : Whales and Dolphins of the North American Pacific: Including Seals and Other Marine Mammals before purchasing it in order to gauge whether or not it would be worth my time, and all praised Whales and Dolphins of the North American Pacific: Including Seals and Other Marine Mammals:

1 of 1 people found the following review helpful. Whales and Dolphins of the North American Pacific By csutherland Excellent whale watch book. The best thing about this book, from a 20 year veteran of formal whale watching with the American Cetacean Society, is that the pictures of these whales and dolphins are exactly what we see through our binoculars. Many a time, we have had to look through this book when a rare sighting occurs to help distinguish, one time, a Bryde's whale from a Fin back. This book helped make the deciding choice. Excellent book. 0 of 0 people found the following review helpful. Great illustrations and information By W. Fogleman Just took this book on an eight day cruise from San Diego to Acapulco. It was very useful in helping identify dolphins and small whales we weren't used to seeing (being from the East). 0 of 3 people found the following review helpful. This is an excellent book for every whale watcher By BK This is an excellent book for every whale watcher. I wish I had read it BEFORE my whale watching trip.

Whales and Dolphins of the North American Pacific is the most comprehensive photographic guide to the marine mammals of the North American Pacific (Baja California, Mexico to South East Alaska), covering all 38 species of cetacean (whales, dolphins and porpoises), six species of seals and sea lions, and the sea otter. Whales and Dolphins of the North American Pacific covers each species' key identification features and includes information on behaviour, status and distribution. Colour distribution maps and full-colour artwork accompanies the text for each species. The book's 38 remarkable colour plates depict typical views of cetaceans at sea, including images of some species never

previously published. *Whales and Dolphins of the North American Pacific* provides extensive information on where, when and how to go whalewatching and a guide to the best places to watch, including four accounts of outstanding days on the water. There are additional chapters on the geography, climate and oceanography of the North American Pacific. Proceeds from the sale of each book will be donated to the American Cetacean Society.

About the Author Graeme Cresswell is a conservation advisor with a longstanding interest in marine wildlife and an accomplished photographer specializing in marine mammals, and a founding member of Organisation Cetacea (ORCA). Cresswell works with WILDGuides, a non-profit publishing organization with a commitment to supporting wildlife conservation. Dylan Walker is a professional field naturalist, conservationist and author with a passion for the marine environment, particularly whales and dolphins. He works with WILDGuides, a non-profit publishing organization with a commitment to supporting wildlife conservation. Todd Pusser is a biologist and wildlife photographer whose marine photography has been published in BBC Wildlife, National Wildlife and many other publications throughout the UK and North America. Pusser works with WILDGuides, a non-profit publishing organization with a commitment to supporting wildlife conservation.
