Guy Mountfort : Wild India: The Wildlife and Scenery of India and Nepal before purchasing it in order to gage whether or not it would be worth my time, and all praised Wild India: The Wildlife and Scenery of India and Nepal:

0 of 0 people found the following review helpful. Indian WildlifeBy C.H.An absolute MUST for anyone interested in nature! This book is from MIT Press (like Wild Thailand, Wild Malaysia, and Wild Indonesia), with 208 pages. India is home to animals like Asiatic Lions, Tigers, Gavials (a type of crocodilian), and the rare White Tiger. There are 400 full-color photos in this book, all of which are great photographs. The book also includes wildlife of Nepal.

Published in association with the World Wide Fund for Nature, Wild India is a valuable current record of the subcontinent's wild places and wilderness areas. Guy Mountfort, an authority on all aspects of species preservation, provides a discerning account of the ecological and human history of the region, focusing on present-day pressures on

India's irreplaceable natural heritage. Gerald Cubitt's superb 400 full-color photographs are informatively captioned and divided into sections on the Himalayas, the Indo-Gangetic Plain, and the Deccan. *Wild India* surveys the great diversity of plant and animal life from the remote Karakoram range in Ladakh to the rainforests of the southwestern ghats, from the deserts of the far west of Rajasthan to the jungles and swamps of Assam and Manipur. Here, among numerous other species, are the magnificent Kashmir stag and the shy musk deer, the rare lion-tailed macaque and the Nilgiri tahr, and the Asiatic lion in its last bastion in the Gir forest along with the golden langur, the one-horned rhinoceros, and herds of elephant and buffalo.
