National Geographic Maps - Reference : World Explorer [Laminated] (National Geographic Reference Map)

before purchasing it in order to gage whether or not it would be worth my time, and all praised World Explorer [Laminated] (National Geographic Reference Map):

3 of 3 people found the following review helpful. We're disappointed and it was not worth the moneyBy Jennifer Smith McCarthyI ordered two maps (U.S. and world map). The plastic packaging sleeve showed them to be correct but when I opened them for my son I found I had two U.S. maps and no world map even though the packaging showed a world map. We had delayed opening them until his room was finished and by then it was too late to return. We're disappointed and it was not worth the money.0 of 0 people found the following review helpful. Overall good, but colors are not super vibrantBy CustomerThe detail on the map is nice and the lamination seems sturdy enough for the poster to support itself when hung on a wall. I wish the colors were a bit more vibrant, but am overall happy with the map.1 of 1 people found the following review helpful. Nice map and easy to read size!By DucksI didn't retain enough from my geography classes! This map makes it easy for me to keep up with where things are happening in the world. Nice size and lamination. Also it's up to date (2014) with any changes in country names. I only wish I had bought this sooner!!

National Geographic's World map is the standard by which all other reference maps are measured. The World map is meticulously researched and adheres to National Geographic's convention of making independent, apolitical decisions based on extensive research using multiple authoritative source. The Explorer style World map uses a vibrant color palette that fills each country for easy identification, stunning shaded relief, and a light blue background grid pattern that echoes the cartographic precision that underlies all National Geographic maps. Drawn in the Winkel Tripel projection, distortions are minimized and unlike many other World maps, Greenland is show the same size as Argentina and not as the size of all of South America.Thousands of place names are carefully and artistically placed on the map to maintain legibility even in the heavily populated ares of Europe, Asia and the Middle East. Details include clearly defined international boundaries, cities, physical features, rivers, and ocean floor features. Inset charts list the

largest cities by population and the largest countries by land mass and population. The map is encapsulated in heavy-duty 1.6 mil laminate which makes the paper much more durable and resistant to the swelling and shrinking caused by changes in humidity. Laminated maps can be framed without the need for glass, so the frames can be much lighter and less expensive. Map Scale = 1:42,334,000 Sheet Size = 32" x 20"

About the Author Founded in 1915 as the Cartographic Group, the first division of National Geographic, National Geographic Maps has been responsible for illustrating the world around us through the art and science of mapmaking. Today, National Geographic Maps continues this mission by creating the world's best wall maps, recreation maps, atlases, and globes which inspire people to care about and explore their world.
