**Stephen Scoffham : World in Maps (Collins Primary Atlases)** before purchasing it in order to gage whether or not it would be worth my time, and all praised World in Maps (Collins Primary Atlases):

This multi-topic atlas of the world introduces the most relevant physical and human topics to reflect the Geography Key Stage 2-3 requirements of the National Curriculum.

An atlas that is much more than just an atlas, this colourful book brings together masses of historical, geographical and environmental information about the planet we live on and organises it in an engaging way for 7-11 year-olds.Each

section has some great questions for discussion, activity suggestions and pointers to sources of further information. There's surely at least one lesson - probably more - in every double page spread. There is also a companion Collins UK in Maps available. Both books have as their strapline 'Explore the world - past, present and future' and they will really help young people do just that. Global Dimension

About the Author Dr Stephen Scoffham is a Visiting Reader in Sustainability and Education at Canterbury Christ Church University. He is the author of many texts for children and teachers on primary geography and has won awards from the Geographical Association for his publications for the past two years running (2014 and 2015). Academically, Stephen has a leadership role developing sustainability and environmental perspectives in university life. His professional interests also include intercultural understanding, the global dimension, creativity and learning. Stephen has been an elected member of the Geographical Association's governing body since 2011 and has recently been appointed as a trustee of Commonwork, a Kent-based charity which explores sustainable living and working.
