1 of 1 people found the following review helpful. have lots of great information. They are waterproof and extremely durableBy G. VisserAnytime I go to a National Park, I always get at Nat Geo map. First of all, do not back country hike without a topographical map. My wife and I hiked the Grand Canyon without one, and we nearly missed our first water stop because we couldn't figure out where on our internet printed map we were. Lucky for us, when we did find our water stop there was a guy who lent us his Nat Geo map for the rest of our hike. These maps are detailed, have lots of great information. They are waterproof and extremely durable.0 of 0 people found the following review helpful. Excellent referenceBy GRSLove NGM maps as they are so detailed and helpful for hiking, etc. Purchase them for all the planned vacations as they are full of information and correspond nicely with hiking books and hiking programs like All Trails.3 of 3 people found the following review helpful. Excellent for Planning Trail UseBy GaryPurchased this for Yosemite backpack planning and trail use. Have used about six National Geographic Trails maps now for backpacking in different parts of the U.S. Always very helpful. In this case, it would be better if map elevation profiles and information about specific trails were available, but the map would need to be twice as big. So a map for a specific part is required for quick profile info or internet searching. Excellent product.
